Outline

Introduction

It is a lot like Javascript just that a syntax is a little different.

DartPad

An online pad can be found at DartPad

Main

```
void main() {
  print("Hello World!");
}
```

Variables

Types

- Integer : `int`
- String : `String`
- Boolean : `bool`
- Dynamic : `dynamic`
- List: `List`
- Void: `void` (returns nothing)

Usage

```
dynamic main() {
  int age = 30;
  print(age);
  String name = 'chul-li';
  print(name);
  bool isNight = false;
```

Functions

Main Function

Top level required function in dart

```
void main() {

}
```

void means function is not gonna return anything.

Return what in function?

```
void main() {
  print("something");
  String greet = greeting();
  print(greet);
  int age = getAge();
  print(age);
```
